MotoShot Robotic Training Systems

Training Impact & Investment - Good / Better / Best

Standard chassis and AR550 NIJ III+ Armored options

TWO CHASSIS OPTIONS Pick by qualification - Standard for handgun/sims; AR550 for rifle/SWAT.

GOOD

Elite chassis + long-range digital remote

MOVEMENT FOUNDATION

Dynamic moving target - the baseline for live, motion-based training

TRAINING IMPACT

- Moves any direction at variable speed - forward, reverse, lateral, 360 deg skid-steer. The robot drives the scenario.
- Forces officers to track, lead, and engage a target actually under motion - builds field-of-vision and muscle memory.
- Standard steel armor handles handgun, less-lethal, sims/UTM, sub-rifle. AR550 NIJ III+ option adds rifle and SWAT qualification.
- Totally portable - concrete, grass, gravel. No range infrastructure required.
- Optional pre-wire now to add Auto-Reset and Turner later as plug-and-play upgrades.
- 1-year manufacturer warranty - parts and electronics. Direct factory support.

INVESTMENT

Standard	**$8,400**
AR550 Armored	**$11,400**

AR550 chassis upgrade +$3,000

BETTER — Option A

REACTIVE ENGAGEMENT

Good + auto-resetting hit response - feedback on every shot

- Everything in Movement Foundation, plus:
- Target falls on a clean hit and auto-resets from the remote - no one walks downrange between reps.
- Instant feedback on every shot - shot discipline and qualification pacing improve measurably.
- Most-requested configuration MotoShot sells - the sweet spot for agency training programs.

Standard	**$12,715**
AR550 Armored	**$15,715**

BETTER — Option B

DECISION DYNAMICS

Good + bi-directional turner - shoot / no-shoot under motion

- Bi-directional turner on top of the mover - edge-to-face pivot triggered from the remote at any point during the drill.
- Shoot / no-shoot decisions on a charging threat - and the same pivot works during lateral movement for flanking drills.
- Trains threat recognition and split-second judgment under stress - the scenarios static targets cannot reproduce.

Standard	**$10,700**
AR550 Armored	**$13,700**

BEST

Elite + Auto-Reset + Turner + MotoMan 3D + remote

DECISION DYNAMICS

Reactive + bi-directional turner - shoot / no-shoot under motion

TRAINING IMPACT

- Everything in Reactive Engagement, plus:
- Bi-directional turner on top of the mover - edge-to-face pivot triggered from the remote at any point during the drill.
- Shoot / no-shoot decisions on a charging threat - and the same pivot works during lateral movement for flanking drills.
- Trains threat recognition and split-second judgment under stress - the scenarios static targets cannot reproduce.

INVESTMENT

Standard	**$15,015**
AR550 Armored	**$18,015**

BUILDING THE BUDGET STORY

- Chassis is the only spec difference: Standard handles handgun, sims, sub-rifle; AR550 NIJ III+ adds rifle and SWAT qualification.
- Each tier is a complete training capability - upgrade later by adding the next module.
- Auto-Reset and Turner can be pre-wired now (plug-and-play next budget cycle).
- System prices shown - freight billed separately at actual carrier rate to destination. Quotes valid 90 days; 4-week production once PO is in hand.
